Pointers in POS –

1
st

step Copy all feature from old user interface into new user interface.

All points mention in above table is covered.

Hardware integration (Printer and Billing machine for payment)

1
st

Flow change in system is -- Order processing system in

pos

is order wise, we have configured item wise like (if we are placing order for 4 item then for

kot

and service boy screen we don't have option to make item wise update served on table or cooked from kitchen).

2
nd

Flow change

is like

general Restaurants or any food industries when

some order anything he pays the bill after lunch or dinner, in our system when we are placing order we have to create bill. We need to change this logic.
